Dear Sir / Madam,

Re: Bioguard products efficacy against Coronaviruses (COVID-19)

Following the recent outbreaks of Coronavirus we can confirm that our product will be effective against the virus.

The coronaviruses are enveloped viruses with a positive-sense single-stranded RNA genome. Unfortunately due to the inherently unstable nature of the virus it is not possible to test disinfectants against this specific organism in laboratory conditions.

In order to prove product efficacy we have to use other more stable enveloped viruses as a substitute viruses to prove product efficacy against this organism.

We can confirm our products have been tested to EN14476 [The European virus testing standard] and also against enveloped viruses such as HIV, Hepatitis C & B, which confirms our product is effective against enveloped virus and will therefore be classified as effective against the coronavirus.

In this regard you can safely use our product to protect you against this virus and will be a much safer and user alternative to bleach based products.

Regards,
